## Pallet Inverting—Fixed

**Toppy Twister 1600 AJ "Manual"** is a stationary pile turner, designed to turn, blow and vibrate pallets of paper or cardboard up to a maximum weight of 1500 kg and with maximum size 125 x 165 cm. The result is a perfect alignment of any single paper / cardboard sheet.

By means of a suitable panel placed on the electrical board, it is possible to set the vibration, the nozzles speed, the quantity of air to be supplied and the working time.

The pallet can be raised upright, rotated by 90 degrees – in this position cleaning and aligning can be carried out – rotated by further 90 degrees and placed back to the ground, upside down.

Thanks to the push-button panel close to the pile turner, any operation can be carried out manually. Like the automatic version, Toppy Twister 1600 AJ "manual" is provided with linear guides for the lowering of the forks.

### Master TOPPY Air Jogger 1400

Master Toppy is a pile turner that blows and vibrates paper or board pallets. Thanks to its special design, Master Toppy doesn't require holes in the ground, because its loading platforms are lowered down to the ground to allow operators to load them by means of a pallet truck.

After the 90° rotation, the paper sheets are positioned vertically along the blowing table, which inclines by 8° so that the paper sheets are rested on a reference square. During the cycle, the operator can inspect the paper pallet and manually extract the faulty sheets when present.

The operator can set the air blowing cycles and the vibration frequency on the control panel depending on paper requirements.

At the end of the cycle, the pile turner positions itself automatically on the ground to allow the extraction of the paper pallet with the aid of a transpallet.
