

Goliath Material Handling Pallet Loader

A ball table at the end of the conveyor line facilitates carton handling. The cartons are pushed by an operator directly onto the stripper plate of the pallet loader according to the desired pattern.

When the stripper plate is full, a button is pressed, and the layer is transferred to the pallet.

The working height is constant and ideal for the operator.

The pallet loader can operate as a semi automatic unit, or it can be integrated into a fully automatic palletising system.

More on the pallet

All cases, including heavy and bulky ones, can easily be stacked to heights of 2500 mm in order to fully utilise the capacity of lorries and containers.

Safe to operate, simple and versatile
The machine requires minimal maintenance and is easy to service.

The machine is available with either left or right-hand operation.

Simple and safe operation

The software is simple and self-explanatory, and is operated using a finger touch panel.

When the stripper plate is filled, the operator steps onto a safety mat that deactivates the machine. The machine is supplied with safety screening.

Stainless steel for wet environments

The pallet loader and the rest of the product range are available in galvanised or stainless steel.

The machine can be ordered in special colours at a surcharge.
