

Goliath Materials Handling Freezer Spacer - Removal

- Remove or change pallets / Retrieve spacers
- Cycle time in less than 60 seconds
- No backache! No lifting of product!
- One person operation, save 95% on labour costs
- Reduce absenteeism
- Lifts up to two tons
- Ideal for use in the, fruit, cold storage, meat industries

AIRFLOW SR1 MACHINE - SPACER RETRIEVER & PALLET CHANGER

Constructed from heavy duty steel plate, with the membrane supports capable of withstanding the environment of meat processing and freezer operations. The inverters are hydraulically operated and are controlled electrically from a central control box, situated on the side of the machine. The exact positioning of this control panel is optional.

The inverters can be manufactured in either a painted finish or stainless steel. The finish does not absorb any dirt, blood, grease or bacteria.

The Airflow SR1 inverters can be loaded with a palletised load on the inverter base with either a forklift truck or a hand pallet truck.

Once activated the machine rotates the pallet on to one corner of the V shaped table and holds the pallet within the V, therefore ensuring that all boxes are always at a 45 degree angle facing away from the operator. This prevents boxes being pulled onto the operator when removing spacers.

When the pallet is horizontal the hydraulic sliding table and top scissors are operated, this provides a gap in order to change the pallet or retrieve the spacers.

The SR1 includes the additional top scissors which prevent collapse of small or unstable cartons.
